
qyros

building the unknown

brand design system v1.0

design philosophy

four principles that govern every pixel of qyros.

01 liquid minimalism

apple liquid glass-inspired transparency, blur, and depth.
every glass surface should feel alive – refracting light,
revealing layers beneath, breathing with the interface.

02 quantum precision

ibm quantum-inspired wire aesthetics and grid systems.
clean 8px grid, mathematical spacing, deliberate alignment.
every element placed with computational exactness.

03 crafted delight

cred-inspired attention to micro-interactions.
every button press, every transition, every hover state
is an opportunity for beauty.

04 india-first, world-ready

rooted in india's national quantum mission,
built for global enterprise. hindi elements where
culturally meaningful. viksit bharat vision.

primary palette

#01A982
hpe green

#17EBA0
green light

#008567
green dark

#FFFFFF
pure white

#161616
carbon black

#0A0A0A
midnight

green scale

shades for hierarchy and distinction across the interface

#E6FFF5
green 100

#B3FFE0
green 200

#66FFBF
green 300

#17EBA0
green 400

#01A982
green 500

#008567
green 600

#006B53
green 700

#004D3D
green 800

#002E25
green 900

usage

- green 500 (#01A982) is the primary brand color – use for ctas, active states, links
- green 100-300 for subtle backgrounds and hover states on light theme
- green 600-900 for dark theme accents and depth variations
- never use more than two green shades in a single component

gemstone accents

subtle accent colors derived from the seven gemstone services

 **diamond**
orchestrator
#E8E8E8 executive ai coordination

 **ruby**
compiler
#FF6B6B nlp to qubo translation

 **sapphire**
templates
#6B9FFF optimization template library

 **opal**
solver
#FFB86B hybrid quantum solver

 **topaz**
discovery
#FFE66B circuit synthesis engine

 **emerald**
memory
#6BFFB8 knowledge & context store

 **amethyst**
workspace
#B86BFF multi-tenant management

usage guidelines

- gem colors are accents only – never dominant in any component
- use at 50% opacity for background tints and glow effects
- pair each gem color only with its service context
- on light theme, use gem colors at 15% opacity for surface tints

theme modes

light-first design with seamless dark and midnight variants

light (default)

background
#FFFFFF

surface
#F7F7F7

typography

headings – telegraf

building the unknown
quantum optimization as a service

body – garet

qyros transforms complex business optimization problems into quantum-solvable formulations using seven autonomous ai services.

seven gemstone services coordinate through gembus to solve optimization problems at scale.

code & numbers – ibm plex mono

```
const solver = await opal.solve(qubo, { n_vars: 42 });
```

0123456789

type scale

element	font	size / line	weight
display	telegraf	64px / 72px	bold
h1	telegraf	48px / 56px	bold
h2	telegraf	36px / 44px	medium
h3	telegraf	28px / 36px	medium
h4	telegraf	24px / 32px	regular
body large	garet	18px / 28px	book
body	garet	16px / 24px	book
body small	garet	14px / 20px	book
caption	garet	12px / 16px	book
code	ibm plex mono	14px / 20px	light
numbers	ibm plex mono	varies	light
data label	ibm plex mono	12px / 16px	light

rule: all text in lowercase. no capitalization. ever.

logo

the qyros wordmark in telegraf typeface, always lowercase

clear space & minimum size

- minimum clear space: 2x the height of the 'q' character on all sides
- minimum digital size: 24px height
- never stretch, rotate, add effects, or alter the wordmark
- never use the logo in any color other than the three variants above
- the qyros logo should be present on all pages, top left

iconography

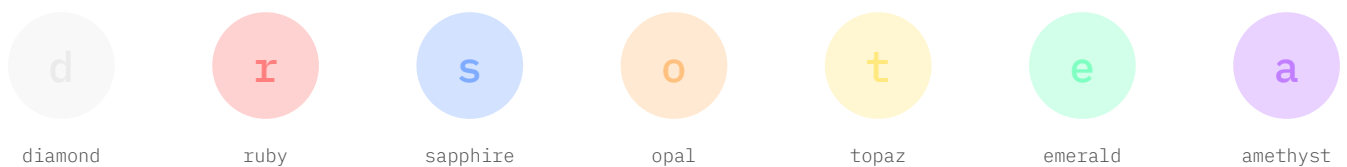

ibm carbon icons + custom gemstone silhouettes

ibm carbon icon system

grid sizes	16px / 20px / 24px / 32px
stroke width	1px for 16px / 1.5px for 20px+
color	inherits text color (carbon on light, white on dark)
style	outlined, geometric, minimal
source	ibm.com/design/language/iconography/ui-icons/library

gemstone icons

- custom subtle gem silhouettes for each of the seven services
- used as section markers and service indicators only
- always rendered at 50% opacity to maintain subtlety
- can have a soft glow in their respective gem color on hover
- never used as primary navigation or action icons

liquid glass

apple-inspired transparency, blur, and depth for every surface

css properties

background	<code>rgba(255, 255, 255, 0.12)</code> on dark / <code>rgba(0, 0, 0, 0.04)</code> on light
backdrop-filter	<code>blur(24px)</code>
border	<code>1px solid rgba(255, 255, 255, 0.18)</code>
border-radius	<code>16px</code> cards / <code>12px</code> buttons / <code>8px</code> inputs
box-shadow	<code>0 8px 32px rgba(0, 0, 0, 0.08)</code>

surface layer 1

alpha: 0.06

surface layer 2

alpha: 0.10

surface layer 3

alpha: 0.14

refraction effects

- subtle color shift on hover (3deg hue-rotate filter)
- light reflection gradient overlay at top edge of glass surfaces
- depth layering: stacked surfaces have increasing blur radius
- active state: slight scale reduction (0.98) for tactile feedback

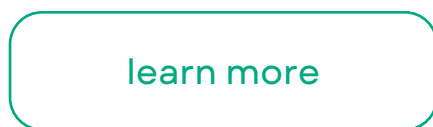

buttons

primary

bg: #01A982 / text: #ffffff
padding: 12px 24px / radius: 12px
hover: lighten 10%, translateY(-1px)

secondary

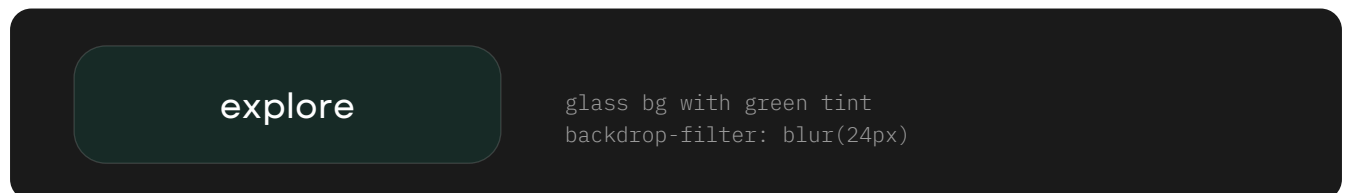

bg: transparent / border: 1px #01A982
text: #01A982 / same sizing as primary

ghost

view documentation

no bg, no border / underline on hover

liquid glass variant

glass bg with green tint
backdrop-filter: blur(24px)

all buttons: lowercase text, letter-spacing: 0.02em

cards

glass card

liquid glass surface, backdrop-filter: blur(24px)

16px radius, 24px padding, subtle gem-color tint

elevated card

white/dark solid surface, box-shadow: 0 2px 8px rgba(0,0,0,.06)

16px radius, 24px padding, clean and simple

feature card

glass card with icon, title, description

gem accent color strip at top (2px), used on website

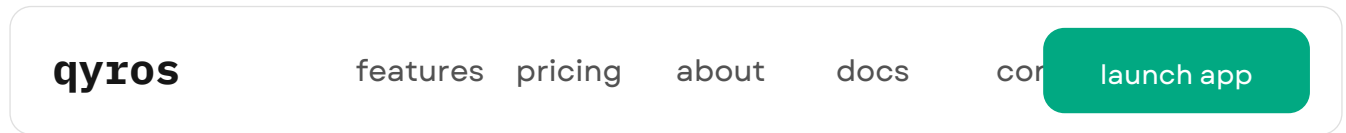

metric card

ibm plex mono numbers, garet label

sparkline or mini chart, compact dashboard layout

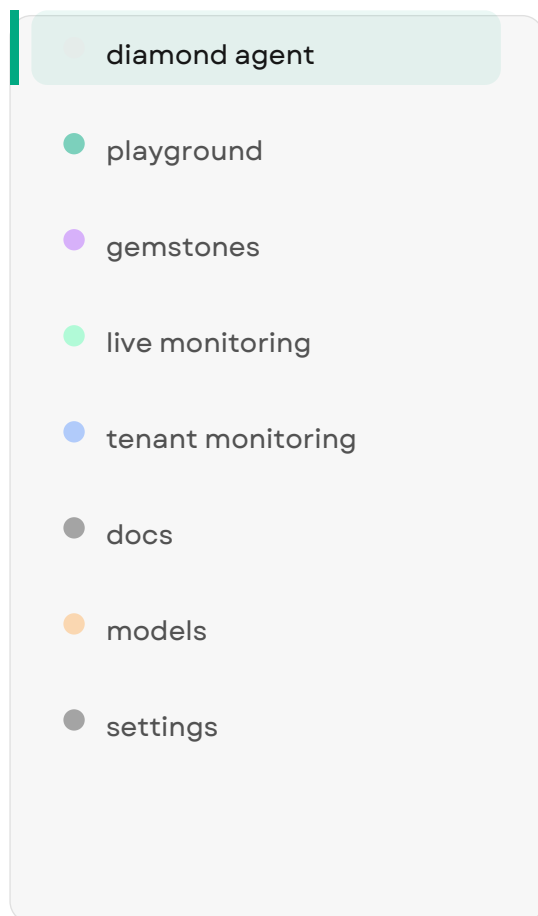

navigation

website navigation

fixed top, glass surface (blur 24px), logo left, links center, cta right

webapp sidebar

- 64px collapsed / 240px expanded
- glass surface background
- icon-only when collapsed (ibm carbon)
- gem-colored active indicator (3px left)
- smooth anime.js expand/collapse

dark mode

dark mode (active)

motion design

anime.js v4 – the core animation engine for qyros

timing scale

micro	100–200ms	hover states, button press, toggle
small	200–400ms	fade in/out, slide, glass reveal
medium	400–600ms	page transitions, modal open
large	600–1200ms	hero animation, 3d model entrance

easing functions

default	<code>easeOutCubic</code>	most ui transitions
bounce	<code>spring(1, 100, 10)</code>	playful interactions, notifications
scroll	<code>easeInOutQuad</code>	scroll-linked animations
sharp	<code>easeOutExpo</code>	urgent state changes

animation patterns

- stagger entry: 50ms delay between elements, `fadeIn + translateY(20px)`
- glass reveal: `scale(0.95) → scale(1) + opacity 0 → 1, 400ms`
- number counting: anime.js object animation for dashboard metrics
- svg morphing: gem icon state transitions between active/inactive
- scroll-linked: parallax on hero 3d quantum computer model
- text splitting: `splitText()` for hero headlines, staggered character reveal
- dag animation: nodes fade-in sequentially as services spawn
- thinking animation: meandering word rotation (diamond agent chat)

3d & immersive

react three fiber + liquid glass overlays

hero quantum computer model

source	3d-models/quantum-computer/ (gltf format)
renderer	react three fiber + @react-three/drei
rotation	slow continuous rotation – 0.5 rpm on y-axis
scroll behavior	scroll-linked zoom: scale 1.0 → 1.3 over first viewport
lighting	soft ambient (0.4) + directional + hpe green rim light
overlay	frosted glass panel positioned in front of model
post-processing	subtle bloom on green rim, film grain at 2%

background effects

dot grid	light theme: #e0e0e0 dots, 24px spacing, 1px radius
noise texture	subtle grain overlay at 3% opacity
gradient mesh	gemstone colors at 5% opacity, animated via anime.js
wire pattern	ibm quantum-inspired circuit lines, carbon color at 8%

website structure

01 landing

hero with quantum computer 3d model, feature highlights, business use case preview, social proof, cta

02 about

vision & mission (viksit bharat, nqm, make in india), founder section, india-first narrative, hindi elements

03 features

detailed product capabilities pulled from docs, gemstone service breakdown, technical depth

04 use cases

finance, supply chain, energy, scheduling with industry-specific visuals and problem examples

05 pricing

free tier / \$99 pro / commercial (contact us), feature comparison table, faq

06 documentation

research docs, developer docs, business use cases, brand documentation – tabbed navigation

07 contact

contact form + company details, map integration, social links

08 login

clean, minimal, ibm quantum-inspired, google oauth + email/password

webapp structure

01 diamond agent

ai chat with liquid glass bubbles, claude-style thinking animation, file upload, voice input – product highlight

02 playground

portfolio optimization, vrp, warehouse, circuit designer
interactive tools to engage and demonstrate value

03 gemstones

service status cards with gem colors, descriptions,
active/inactive indicators

04 live monitoring

real-time dag visualization – nodes fade-in as services
spawn, gem-colored, network arrows show data flow

05 tenant monitoring

logs, deployment status, plugin manager, service blocks
designer – visual debug and admin console

06 docs

quick guide – business, developer, researcher perspectives
embedded help and onboarding

07 models

pre-built optimization model library, each as a card
with description, domain, variable count

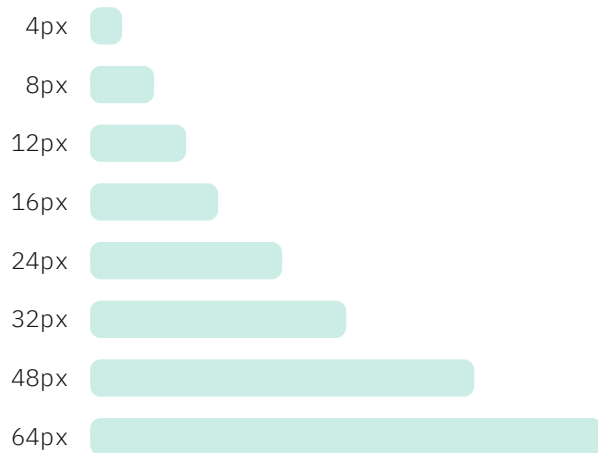

08 settings

profile, usage stats, billing, tenant config,
api key management, workspace preferences

top bar: logo left, breadcrumb center, user avatar right (dropdown with tenant selector)

spacing system

base unit: 8px

grid system

website	12-column, 1200px max-width, 24px gutter
webapp	sidebar (64/240px) + content area (flex), 16px gutter
cards	16px internal padding minimum, 16px gap between cards
sections	96px vertical padding between major sections

accessibility

wcag 2.1 aa minimum across all surfaces

color contrast

4.5:1 for body text, 3:1 for large text (18px+ bold)

focus indicators

2px solid #01a982 with 2px offset on all interactive elements

reduced motion

respect prefers-reduced-motion, disable all anime.js animations

screen reader

all icons have aria-labels, semantic html throughout

keyboard nav

full tab support with visible focus rings on every element

color independence

never convey information through color alone – use icons + text

touch targets

minimum 44x44px for all interactive elements on mobile

text scaling

all text scales correctly up to 200% zoom without overflow

brand voice

tone

confident, precise, quietly ambitious.
never loud, never boastful. let the technology speak.

language

technical but accessible. never condescending.
explain quantum concepts without dumbing them down.

style

lowercase everything. short sentences. active voice.
no jargon without context. clarity over cleverness.

hindi

use sparingly and meaningfully.
vision statements, about us, cultural references.
ibm plex sans devanagari for all hindi text.

taglines

building the unknown primary tagline

quantum optimization as a service discriminator
